

12-Point Twist-Lok Access Covers

The latest generation of Petroleum Containment's patented "Twist-Lok" Access Covers provide quick and easy access while ensuring a true watertight seal.

Features:

- **Easy Access** – Access to the equipment is as simple as a 12 degree twist. Competing covers require removing as many as 12 wingnuts to access the sump. Many times these nuts are never reinstalled due to poor workmanship, which ultimately leads to product failure.
- **More Contacting Surface Area** – With 200% more contacting surface than previous models, there are fewer places for water to penetrate.
- **Triple Seal Gasket** – Made of high quality rubber, our triple seal gasket serves as three separate gaskets in one.
- **Large Access Opening** – With a 20% larger opening than previous models, this cover provides easier access while fitting within standard 36" manhole openings.
- **Low Profile Design** – Accommodates shallow burial depths better.
- **Rigid Construction** – Manufactured with UL listed Isophthalic materials to provide a rigid construction that will not deform due to backfill pressure.
- **Injection Molded** – Provides a smooth gelcoated finish on both surfaces to prevent personnel for getting cuts and scratches while handling the access cover.
- **Contoured Sealing Gasket** - Made of high quality rubber, our contoured seal gasket contours to the mating protrusion to provide maximum contacting surface.
- **Conversion Kit Available** - Easily upgrade existing tank sumps with a simple epoxy pour. Model #PC12PLS-1
- **4" Inspection Port** - Optional inspection port allows quick inspection without removing the entire access cover. Model #IP4000-1
