

EZ - PLUMB DISPENSER SUMPS

The EZ-Plumb Dispenser Sumps are the most accommodating dispenser sumps, providing maximum access for installing plumbing and electrical connections while working in shallow burial and irregular island foundations.

FEATURES:

- **Two-Part Design with Epoxy Bonding Trough** - Makes installations simpler than ever. Installers have plenty of room to install the equipment in the base before the upper section is attached. Then, one simple epoxy pour guarantees a water-tight bond.
- **Chemically Bonded** – The most dependable bond ensures a watertight assembly making the two piece design work as well as a single piece design.
- **UL Listed Isophthalic Fiberglass Materials** - Provide a rigid construction that prevents deforming due to backfill. Fiberglass can be easily repaired in the field by qualified technicians if drilled incorrectly or damaged by construction equipment.
- **Smooth White Interior** – Makes the working area brighter and reduces cuts and scratches while working inside the sump.
- **Heavy Gauge Steel Frames** – Provide strength and rigidity. Designed to lock into the concrete foundation.
- **Individual Stabilizer Bars with 3-Axis Adjustment** – Accommodates multi-product dispensers without displacing the product lines. Ensures proper load transfer in the case of an impact from any direction.
- **Optional Rainlip** – Protrudes into the bottom of the dispenser to prevent surface water from rain and washdowns from entering the sump.
