

Engineered Solutions for Commercial & Industrial Fueling

PCI delivers engineered containment solutions for demanding commercial and industrial environments. Our fiberglass sumps, penetration fittings, and watertight access systems are trusted where safety, durability, and system integrity matter most. We also offer custom sumps tailored to unique site conditions, supporting applications from data centers and marinas to aviation and backup power systems.

Marinas

Data Centers

Aviation

PCI recommends the following products to ensure safe, reliable, and efficient installation of fueling systems across these commercial applications.

STAINLESS SUMPS

All PCI marina sumps are constructed from 304 stainless steel to ensure maximum environmental compatibility. Each unit features a removable cover for versatile installation and is sized to meet the latest PEI Recommended Practices.

Small: MTS482218-CB0
Large: MTS483018-CB0
Atlas X: MDS144270
Fuelhouse: MDS240270

TRANSITION SUMPS

PCI transition sumps are built for durability and easy installation, with forged steel or compression couplings to fit a range of applications. A large access opening simplifies service, with stainless steel and custom options available to meet specific project needs.

Small: TS372929-5B0*
Large: TS462929-5B0*

*Double wall options available

DISPENSER SUMPS

PCI dispenser sumps are designed for strength, efficiency, and installation flexibility. Conduitless entry reduces wall penetrations, minimizing the risk of water intrusion, and stainless steel options are available to meet specific project requirements.

Bennett 3000: CLS120206
Gasboy Atlas X: CLS144246
Wayne Select: CLS154260
