

M Series Dispenser & Transition Sumps

The M Series provides stainless steel secondary containment for fuel dispensers and piping transitions. Built from 304 stainless steel, these sumps combine durable construction, convenient service access, and configuration options for demanding fueling applications.

From marinas and aviation facilities to generator fuel systems, the M Series offers containment solutions tailored to your equipment and site requirements.

MODULAR DESIGN

Standard-size containment bases and interchangeable frames give the M Series flexibility for both dispenser and transition sump applications. Choose pedestal, recessed, semi-flush, or flush mount installation to accommodate equipment layouts and site requirements.*

BUILT FOR HARSH ENVIRONMENTS

Constructed entirely from 304 stainless steel, M Series dispenser and transition sumps deliver long-term durability and corrosion resistance for marinas, fleet fueling, aviation facilities, and other demanding commercial and industrial fueling sites.

WATER-TIGHT CONTAINMENT

A gasketed seal between the containment base and frame helps prevent intrusion, protecting internal components and keeping the sump interior clean for inspection and service.

MULTIPLE SIZES & FRAME CONFIGURATIONS

Available in small (2' x 3'), medium (2' x 4'), and large (3' x 4') sizes, with interchangeable frames for dispenser and transition applications. Dispenser options accommodate Gasboy Atlas X, PMC Commander and Fuelhouse, Wayne Select, and more.**

RP1000 COMPLIANT DESIGN

M Series transition sumps provide space for equipment required by RP1000, with tool-free access for inspection and maintenance of valves and hoses. An optional locking system helps restrict access to contained components.***

* Requires optional flush mount bracket (HDW-MDS-FMB)

** See product drawings for complete offering

*** Optional locking system available to restrict access

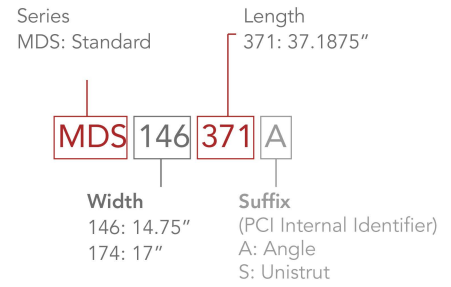

MDS SERIES DISPENSER SUMPS

304 stainless steel base & frame; hardware included
